Volume 10 is a direct continuation and extension of Volume 3 in this series Visual Cortex Given the impressive

proliferation of papers on visual cortex over the intervening eight years Volume 10 has specifically targeted visual cortex in primates and even so it has not been possible to survey all of the major or relevant developments in this area Some research areas are experiencing rapid change and can best be treated more comprehensively in a subsequent volume f From a review of a previous volume A valuable addition to the series on the cerebral cortex and should be available as a reference work in any department with interests in developmental neuroscience
