By Clyde W. Oyster : The Human Eye: Structure and Function the human eye is an organ which reacts to light and pressure as a sense organ the mammalian eye allows vision human eyes help provide a three dimensional moving structure 2 primary building blocks include protein about 60 of the membrane and lipid or fat about 40 of the membrane the primary lipid is called The Human Eye: Structure and Function:

16 of 18 review helpful The Human Eye Structure and Function Clyde W Oyster By F Dow Smith This is an excellent book which covers comprehensively the structure and function of the human eye as its subtitle implies The selection of subject matter is balanced clearly presented and well illustrated The book is sprinkled with interesting illustrated

historical vignettes reminiscent of those in the classical Duke Elder We are a highly visual species Most of our information about the world comes to us through our eyes and most of our cultural and intellectual heritage is stored and transmitted as words and images to which our vision gives access and meaning Knowing more about our eyes and vision is therefore one path to better understanding ourselves And as it happens the human eye is a fairly representative vertebrate eye knowing more about it tells us much about the eyes of ot This is an elegant and immensely satisfying book on the anatomy and functioning of the human eye Its breadth and depth make it appropriate for both vision practitioners and upper undergraduates and graduate students interested in vision research This is a
