By Rudolf Nieuwenhuys, Hans J. ten Donkelaar, Charles Nicholson : The Central Nervous System of Vertebrates the central nervous system consisting of the brain and spinal cord is hollow and situated above dorsal to the gut this contrasts with the solid ventral nerve cord of the invertebrates the vertebrate nerve cord and brain contain a liquid cerebrospinal fluid which itself contains mineral salts and traces of protein and sugar the central nervous system of vertebrates 9783642621277 medicine and health science books amazon The Central Nervous System of Vertebrates:

0 of 0 review helpful Five Stars By Ray Merewether Beautiful illustrations axolotl amphioxus coelacanth all the way up to man in a coherent presentation 3 of 4 review helpful The only serious text on vertebrate nervous system By Charles R Watson This is an outstanding attempt to summarize the evolution of the vertebrate nervous system There is no serious comp This comprehensive reference is clearly destined to become the definitive anatomical basis for all molecular neuroscience research The three volumes provide a complete overview and comparison of the structural organisation of all vertebrate groups ranging from amphioxus and lamprey through fishes amphibians and birds to mammals This thus allows a systematic treatment of the concepts and methodology found in modern comparative neuroscience Neuroscientists comparativ The new synthesis by R Nieuwenhuys and colleagues is stunning and represents a level of scholarship that is rarely achieved in any field The quality and uniformity of the illustrations are remarkable of immense value to contemporary neurobiologists
